

Nunavath Vishnu Naik

Senior Analyst

PROFILE SUMMARY

Machine Learning Engineer with 2 years of experience in developing and deploying ML models, specializing in anomaly detection, sentiment analysis, and natural language processing (NLP). Skilled in designing and implementing end-to-end ML solutions, optimizing workflows with CI/CD, and deploying scalable models in cloud environments. Adept at using advanced Generative AI techniques, fine-tuning BERT and GPT models, and leveraging big data frameworks like PySpark for high-performance analytics.

EDUCATION

2018	B.Tech/B.E. National Institute of Technology, Durgapur
2012	XIIth English
2010	Xth English

WORK EXPERIENCE

Nov 2022 - Nov 2024	Senior Analyst Thryve Digital * Developed and deployed machine learning models to analyze large-scale healthcare datasets for risk management and fraud detection. * Designed and implemented anomaly detection models using K-Modes clustering and scikit-learn to identify fraudulent patterns in medical insurance claims. * Leveraged NLP techniques to extract insights from unstructured text data, improving customer sentiment analysis. * Automated data pipelines using Apache Airflow (Cloud Composer) to streamline ML model training and deployment. * Integrated Generative AI (BERT, GPT) to enhance emotion classification in sentiment analysis. * Implemented CI/CD workflows for model versioning, retraining, and deployment, ensuring high scalability and performance.

Anomaly Detection for Healthcare Insurance Fraud Using Machine Learning on GCP

Objective: Identify fraudulent claims by analyzing patterns in procedure codes, provider IDs, and specialty codes.

Key Contributions:

- * Developed an unsupervised anomaly detection model using K-Modes clustering and deployed it on Google AI Platform.
- * Stored and managed large datasets using Google Cloud Storage (GCS) and BigQuery.
- * Automated ML workflows with Apache Airflow (Cloud Composer) for real-time data processing.
- * Achieved 15% reduction in fraudulent claims, leading to significant cost savings.

Technologies Used: Python, Pandas, NumPy, scikit-learn, Django, Airflow, BigQuery, Cloud Storage, Cloud Composer, Matplotlib, Seaborn

11 Months

Sentiment Analysis Project: Customer Review Sentiment Analysis and Recommender System Integration

Objective: Build an ML-driven sentiment analysis system integrated with a recommender engine to improve healthcare service quality.

Key Contributions:

- * Developed NLP pipelines to preprocess and analyze customer reviews, identifying key themes and sentiments.
- * Used PySpark for distributed data processing, handling large-scale datasets efficiently.
- * Fine-tuned BERT and GPT models using Hugging Face Transformers for healthcare-specific sentiment classification.
- * Generated AI-synthetic data to address class imbalances, improving model robustness.
- * Provided business insights that increased customer satisfaction by enabling data-driven decision-making.

Technologies Used: Python, PySpark, TensorFlow, Hugging Face, BERT, GPT, Django, SQL, Apache Airflow, Matplotlib, Seaborn
