Other	VS code, Postman, GIT, Splunk, Jira.

Professional Experience

TEKsystems - Thryve Digital Health LLP	March 2023 – Till Date
Senior Software Engineer	

EVOC - Enterprise Voice of Customer (EVOC):

EVOC is an advanced application designed to capture and analyze customer feedback regarding Payer and Provider services and the Member Journey through claims and insurance processes. The application transforms NLP-processed data into dynamic visualizations using Chart.js modules such as Bar, Pie, Doughnut, as well as tables and text elements. Data sources include call transcripts, social media, and NPS (Net Promoter Score). Users with role-based access can create, view, and edit dashboards with advanced filters, utilizing widget elements like bar charts, pie charts, and tables. Additionally, the application features a Document Explorer that allows customer staff to access all member journey transcripts, and dashboard elements can be dragged, rearranged, and resized for a customized experience.

Roles & Responsibilities:

- Development of the dashboard module, including designing, coding, and integrating all components.
- Develop reusable components to enhance future scalability and reduce development costs.
- Deployment processes across multiple environments, ensuring smooth and error-free releases.
- Monitor and maintain the application, implementing improvements and bug fixes as needed.
- Interacted with the Testing Team, Scrum Masters, and Business Analysts to fix issues.
- Worked closely with the Product Manager and UX designer.
- Involved in product requirement discussions.

Environment: Next.js, JavaScript, Bootstrap, React.js/Redux Toolkit,.

ATMECS Technologies	July 2019 – March 2023
<i>Software Engineer</i>	

The Fan Lounge (TFL) :

ATMECS' The Fan Lounge Platform vision stands on three pillars - Intelligent Data Management & Analytics Framework, that delivers Immersive Content for all key Stakeholders in the Sports Ecosystem, creating incredible breakthrough experiences for sports fans. Platform Provides a Seamless User Experience from an Ease of Use perspective for today's "Fluid" Sports Fan.

Roles & Responsibilities:

- Converting the Figma Screens into React Native Code.
- Integrating the Figma Designs with the REST API's as per requirements.
- Unit Test Cases for testing the Code quality.
- Converting TFL Web Application as per Figma Screens provided.
- Integrating the TFL Web Application with REST API as per requirements.
- Converting TFL Management Console Application as per Figma Screens provided.
- Integrating the TFL Management Application with Provided Data Analytics Tools.
- Setting up the Multiple Environments for the TFL Application like development, qa, uat.
- Builds the React-Native code for IOS Deployments.
- Deploying the IOS Builds to the Apple Development Store.

Environment: ReactJS, React Native, Postman, TypeScript.

Citrix :

Citrix Workspace Microapps service is a solution focused on delivering actions and notifications from your applications right into your Workspace or other channels. You do this by building Integrations from your application data sources to the Microapps service enabling you to pull actions from your applications into Workspace. Microapps deliver actionable forms and notifications. Microapps can write back to source systems. OAuth2.0 is the recommended authentication mechanism for writing to SaaS applications. An Access token specific to each user is stored to enable a seamless user experience for user actions.

Roles & Responsibilities:

- Creation of Integrations with different Microapps as per the client requirement.
- Feasibility Analysis of Applications such as GTM, ZOOM, DOCUSIGN to Integrate in WSI(Microapps).
- Designed and Developed Scripting for Microapp Integrations such as GTM, ZOOM, DOCUSIGN.
- Support and Debugging the Microapp Integration in Client Environment.
- Preparation of Detailed Documentation for the Microapp Integrations.
- Created different Event notifications for respective Microapps pages along with client requirements.
- Debugging of different level applications implement it into Microapp level.
- Worked with Creation of HTTP Integrations along with Out of box Integrations.
- Using Identification and access management provided access to the different users.
- Worked with Import and Export of different Microapps.
- Prepared West Jet ServiceNow requirement using Microapps as per client requirement and implemented same into client environment.
- Debugging of different types of issues related to Microapps by using Splunk.

Environment: Citrix Cloud, Postman, Rest DB, Mock DB, JSON, JavaScript, JIRA.

Education

-
- Jawaharlal Nehru Technological University, Hyderabad, **B. Tech** 2016
